

Claim 1 : Color Is More Visible In Large Diamonds

Analysis : check if diamonds that have more carats are predominantly in a different color

Claim2: color is important but diamond cut is the most important factor

Analysis : check using visualization by comparing cut vs Color with respect to price and see whether this claim is true

Claim 3: Color Grade is directly related to the price . D Grade has the highest price and K would have least price in that order (Diamonds are typically in Grades D through K)

Analysis : check using visualization by comparing color vs price and if they are directly proportional
